

Solution – DFS

Consider the following graph:

Starting node: A

DFS Traversal Steps

1. Start from **A** → Visit A.
2. Move to **B** → Visit B.
3. Move to **D** → Visit D.
4. D has no unvisited neighbour → **Backtrack to B**.
5. Move to **E** → Visit E.
6. E has no unvisited neighbour → **Backtrack to B**.
7. B has no more unvisited neighbours → **Backtrack to A**.
8. Move to **C** → Visit C.
9. Move to **F** → Visit F.
10. F has no unvisited neighbour → **Traversal completed**.

Final DFS Order

A → B → D → E → C → F
