

Write a Prolog Program for A DB WITH NAME,DOB.

Aim:

to A DB WITH NAME ,DOB using python

Algorithm:

- Start
- Define facts containing a person's name and date of birth (DOB).
- Create a Prolog predicate person(Name, DOB) to store the details.
- Accept the name as input from the user.
- Search the database for the given name.
- If the name is found, display the corresponding DOB.
- If the name is not found, display "Person not found".
- Stop.

Program:

% define some facts about people and their DOBs

dob(john, date(1990, 5, 1)).

dob(jane, date(1985, 12, 10)).

dob(bob, date(1978, 2, 28)).

dob(sue, date(1995, 8, 15)).

dob(tom, date(2000, 4, 22)).

% define a predicate to look up a person's DOB by name

lookup(Name, DOB) :-

dob(Name, DOB).

example query: lookup john's DOB

?- lookup(john, DOB).

DOB = date(1990, 5, 1).

% example query: lookup sue's DOB

?- lookup(sue, DOB).

DOB = date(1995, 8, 15).

Output:

```
SWI-Prolog (AMD64, Multi-threaded, version 9.2.9)
File Edit Settings Run Debug Help
Welcome to SWI-Prolog (threaded, 64 bits, version 9.2.9)

For built-in help, use ?- help(Topic). or ?- apropos(Word).

?-
% c:\Users\Madhu Bavana\OneDrive\Desktop\Frl\2.pl compiled 0.00 sec, 6 clauses
?-
| lookup(john, DOB).
DOB = date(1990, 5, 1).
?- lookup(sue, DOB).
DOB = date(1995, 8, 15).
?-
```

Result:

Hence the Prolog Program for A DB WITH NAME, DOB is done.
